No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                             1308.5

29-OCT-1997;
03-FEB-1998;
The present invention describes Wnt-1 induced secreted polypeptides, WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-1, WISP-2 and WISP-3 have homology to connective tissue growth factor (CTGF). Products from the present invention can be used to treat WISP-related

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       products can be used to treat arteriosclerosis. The products can used to treat other diseases e.g. benign and malignant tumours, leukaemia and lymphoid malignancies, neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stroma blastocoelic disorders, haematopoissis-related disorders, tissuedisorders, skin disorders, desmoplasia, fibrotic lesions, kidney disorders, bone-related disorders such as osteoporosis, trauma such as osteoporosis, trauma such as osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                burns, incisions, and other wounds, connective tissue disorders, catabolic states, testicular related disorders, and inflammatory, any anyiogenic and immunologic disorders including arteriosclerosis. The products can also be used for detection and diagnosis especially of individuals with neoplastic cell growth or proliferation. The products can be used in the production of transgenic or knock-out animals.

Antibodies can be used to induce death in WISP-1, 2 or 3 overexpressing

The products can be used to treat arteriosclerosis. The products can also used to treat other diseases e.g. benign and malignant tumours, leukaemia and lymphoid malignancies, neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal, blastocoelic disorders, haematopolesis related disorders, tissue-grow disorders, skin disorders, desmoplasia, fibrotic lesions, kidney of disorders, bone-related disorders such as osteoporosis, trauma such a missorders, bone-related disorders such as osteoporosis, trauma such a missorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI;
                        burns, incisions, and other wounds, connective tissue disorders, catabolic states, testicular-related disorders, and inflammatory, angiogenic and immunologic disorders including arteriosclerosis. The products can also be used for detection and diagnosis especially of individuals with neoplastic cell growth or proliferation. The products can be used in the production of transgenic or knock-out animals.

Antibodies can be used to induce death in WISP-1, 2 or 3 overexpressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      tissue-growth disorder; skin disorder; desmoplasia; fibro kidney disorder; bone-related disorder; osteoporosis; tracconnective tissue disorder; catabolic state; inflammation
                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes Wht-1 induced secreted polypeptides, WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-1, WISP-and WISP-3 have homology to connective tissue growth factor (CTGF) products from the present invention can be used to treat WISP-related discrete.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure;

disorders such as breast, ovarian, and colon cancer or melanoma. The products can be used to treat arteriosclerosis. The products can also be used to treat other diseases e.g. benign and malignant tumours, leukaemia and lymphoid malignancies, neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal, and colon colored to disorders, haematopoiesis-related disorders, tissue-growth coloreders, skin disorders, desmoplasia, fibrotic lesions, kidney coloreders, skin disorders such as osteoporosis, trauma such as turns, incisions, and other wounds, connective tissue disorders, catabolic states, testicular-related disorders, and inflammatory, catabolic states, testicular-related disorders, and inflammatory, candiogenic and immunologic disorders including arteriosclerosis. The products can also be used for detection and diagnosis especially of conditionals with neoplastic cell growth or proliferation. The products can be used in the production of transgenic or knock out animals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 tissue-growth disorder; skin aisurue, www.r-----kidney disorder; bone-related disorder; osteoporosis; trauma; burn; kidney disorder; bone-related disorder; catabolic state; inflammation; connective tissue disorder; catabolic state; imminological disorder.
                                                                                                                                                                                                                                                                                                                                                        The present invention describes Wnt-1 induced secreted polypeptides, WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-1, WISP-2 and WISP-3 have homology to connective tissue growth factor (CTGF).

Products from the present invention can be used to treat WISP-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WNT-1 induced secreted protein; WISP-1; WISP-2; WISP-3; CTGF; tumour connective tissue growth factor; cancer; melanoma; arteriosclerosis; leukaemia; lymphoid malignancy; haematopoiesis-related disorder; tissue-growth disorder; skin disorder; desmoplasia; fibrotic lesion;

29-OCT-1997;
03-FEB-1998;
The present invention describes Wnt-1 induced secreted polypeptides, WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-1, WISP-2 and WISP-3 have homology to connective tissue growth factor (CTGF). Products from the present invention can be used to treat WISP-related disorders such as breast, ovarian, and colon cancer or melanoma. The products can be used to treat arteriosclerosis. The products can also be used to treat other diseases e.g. benign and malignant tumours, leukaemia and lymphoid malignancies, neuronal, gilal, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal, and blastocoelic disorders, hadmatopolesis-related disorders, tissue-growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WNT-1 induced secreted protein; WISP-1; WISP-2; WISP-3; CTGF; tumour connective tissue growth factor; cancer; melanoma; arteriosclerosis; leukaemia; lymphoid malignancy; haematopoiesis-related disorder; tissue-growth disorder; skin disorder; desmoplasia; fibrotic lesion; kidney disorder; bone-related disorder; osteoporosis; trauma; burn; connective tissue disorder; catabolic state; inflammation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes Wnt-1 induced secreted polypeptides, CC WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-1, WISP-2 CC and WISP-3 have homology to connective tissue growth factor (CTGF). CC Products from the present invention can be used to treat WISP-related CC disorders such as breast, ovarian, and colon cancer or melanoma. The CC products can be used to treat other diseases e.g. benign and malignant tumours, CC leukaemia and lymphoid malignancies, neuronal, glial, astrocytal, and Chipyothalamic and other glandular, macrophagal, epithelial, stromal, and CC hypothalemic and other glandular, macrophagal, epithelial, stromal, and CC blastocoelic disorders, haematopoiesis-related disorders, tissue-growth CC disorders, skin disorders, desmoplasia, fibrotic lesions, kidney CC catabolic states, testicular-related disorders, and inflammatory, CC angiogenic and immunologic disorders including arteriosclerosis. The products can also be used for detection and diagnosis especially of conditionals with neoplastic cell growth or proliferation. The products can be used in the production of transgenic or knock-out animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                   Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC The present invention describes Wnt-1 induced secreted polypeptides, CC WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-2, WISP-2 CC and WISP-3 have homology to connective tissue growth factor (CTGF). CC Products from the present invention can be used to treat WISP-related CC disorders such as breast, ovarian, and colon cancer or melanoma. The products can be used to treat arteriosclerosis. The products can also be used to treat other diseases e.g. benign and malignant tumours, complete to the diseases e.g. benign and malignant tumours. CC leukaemia and lymphoid malignancies, neuronal, glial, astrocytal, stromal, and other glandular, macrophagal, epithelial, stromal, and collastocoelic disorders, haematopolesis-related disorders, kidney components, skin disorders, desmoplasia, fibrotic lesions, kidney collastocoelic disorders, desmoplasia, fibrotic lesions, trauma such as collastocoelic disorders, and other wounds, connective tissue disorders, conspicuted to the states of the productive tissue disorders, can also be used for detection and diagnosis especially of conjugent and immunologic disorders including arteriosclerosis. The products can also be used for detection and diagnosis especially of conjugent and the production of transgenic or knock-out animals. CC antibodies can be used to induce death in WISP-1, 2 or 3 overexpressing ccells.

                                                                                                                                                                                                                                                                                                  used to treat other diseases e.g. benign and malignant tumours, leukaemia and lymphoid malignancies, neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal, and blastocoelic disorders, haematopoiesis-related disorders, tissue-growth disorders, skin disorders, desmoplasia, fibrotic lesions, kidney disorders, bone-related disorders such as osteoporosis, trauma such as burns, incisions, and other wounds, connective tissue disorders, catabolic states, testicular-related disorders, and inflammatory, angiogenic and immunologic disorders including arteriosclerosis. The products can also be used for detection and diagnosis especially of individuals with neoplastic cell growth or proliferation. The products can be used in the production of transgenic or knock-out animals.

Antibodies can be used to induce death in WISP-1, 2 or 3 overexpressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes Wnt-1 induced secreted polypeptides, WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-1, WISP-2 and WISP-3 have homology to connective tissue growth factor (CTGF). Products from the present invention can be used to treat WISP-related disorders such as breast, ovarian, and colon cancer or melanoma. The products can be used to treat arteriosclerosis. The products can also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      connective tissue growth factor; cancer; melanoma; arteriosclerosis; leukaemia; lymphoid malignancy; haematopolesis-related disorder; tissue-growth disorder; kin disorder; desmoplasia; fibrotic lesion; kidney disorder; bone-related disorder; osteoporosis; trauma; burn; connective tissue disorder; catabolic state; inflammation;

                                                                                                                                                  The present invention describes wht-1 induced segreted polypeptides, CC wisp-1, 2 and 3. The novel wisp polypeptides, designated wisp-1, wisp-2 cc and wisp-3 have homology to connective tissue growth factor (CTGF). CC Products from the present invention can be used to treat Wisp-related color describes such as breast, ovarian, and colon can be products can also be used to treat other diseases e.g. benign and malignant tumours, colored to treat other diseases e.g. benign and malignant tumours, colored to treat and lymphoid malignancies, neuronal, gulal, astrocytal, and the products can also be used to treat other diseases e.g. benign and malignant tumours, colored to treat other diseases e.g. benign and malignant tumours, colored to treat other diseases e.g. benign and malignant tumours, colored to treat other diseases, neuronal, gulal, astrocytal, and colored and colored plantic diseases, and other spandular, macrophagal, epithelial, stromal, and colored colored colored system tissue-growth colored system to the strong treated disorders, tidney colored to the strong treated disorders, tidney colored to the strong treated disorders, the strong treated disorders, and inflammatory, colored to the strong treated disorders, and inflammatory, colored to the strong treated to the strong treated disorders and the manufactor of the strong treated to the strong treated treated to the strong treated to the strong treated treated to the strong treated to the strong treated treated to the strong treated to the strong treated treated treated treated to the strong treated trea
